

Siberian larch is very resinous and extremely hard wearing, making it one of the toughest and most durable softwoods in the world.

A perfect choice due to its aesthetic beauty and excellent durability

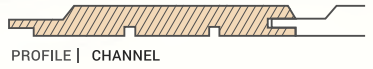

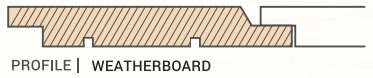

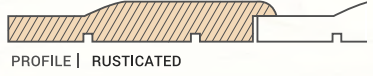

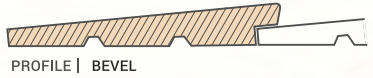

Siberian Larch (SILA) is the cladding of choice for many architects, contractors and self-builders, due to the fact that it is extremely versatile - being suitable for most external timber cladding applications - has excellent durability properties and displays attractive figuring.

SIZE

SILA Cladding material available in lengths up to 6m. We offer a range of board widths: 95, 120, 143, and 195mm. The narrower board widths offer a number of advantages including more choice in design arrangements and improved dimensional stability.
